

Professional power.

The PG-XLM features a bank of eight switched, filtered and surge protected outlets on the back panel. On the front panel, the PG-XLM sports one switched convenience outlet, a real-time voltage meter, 2 pull-out lamps, and a USB port for device charging.

The PG-X features a bank of eight switched, filtered and surge protected

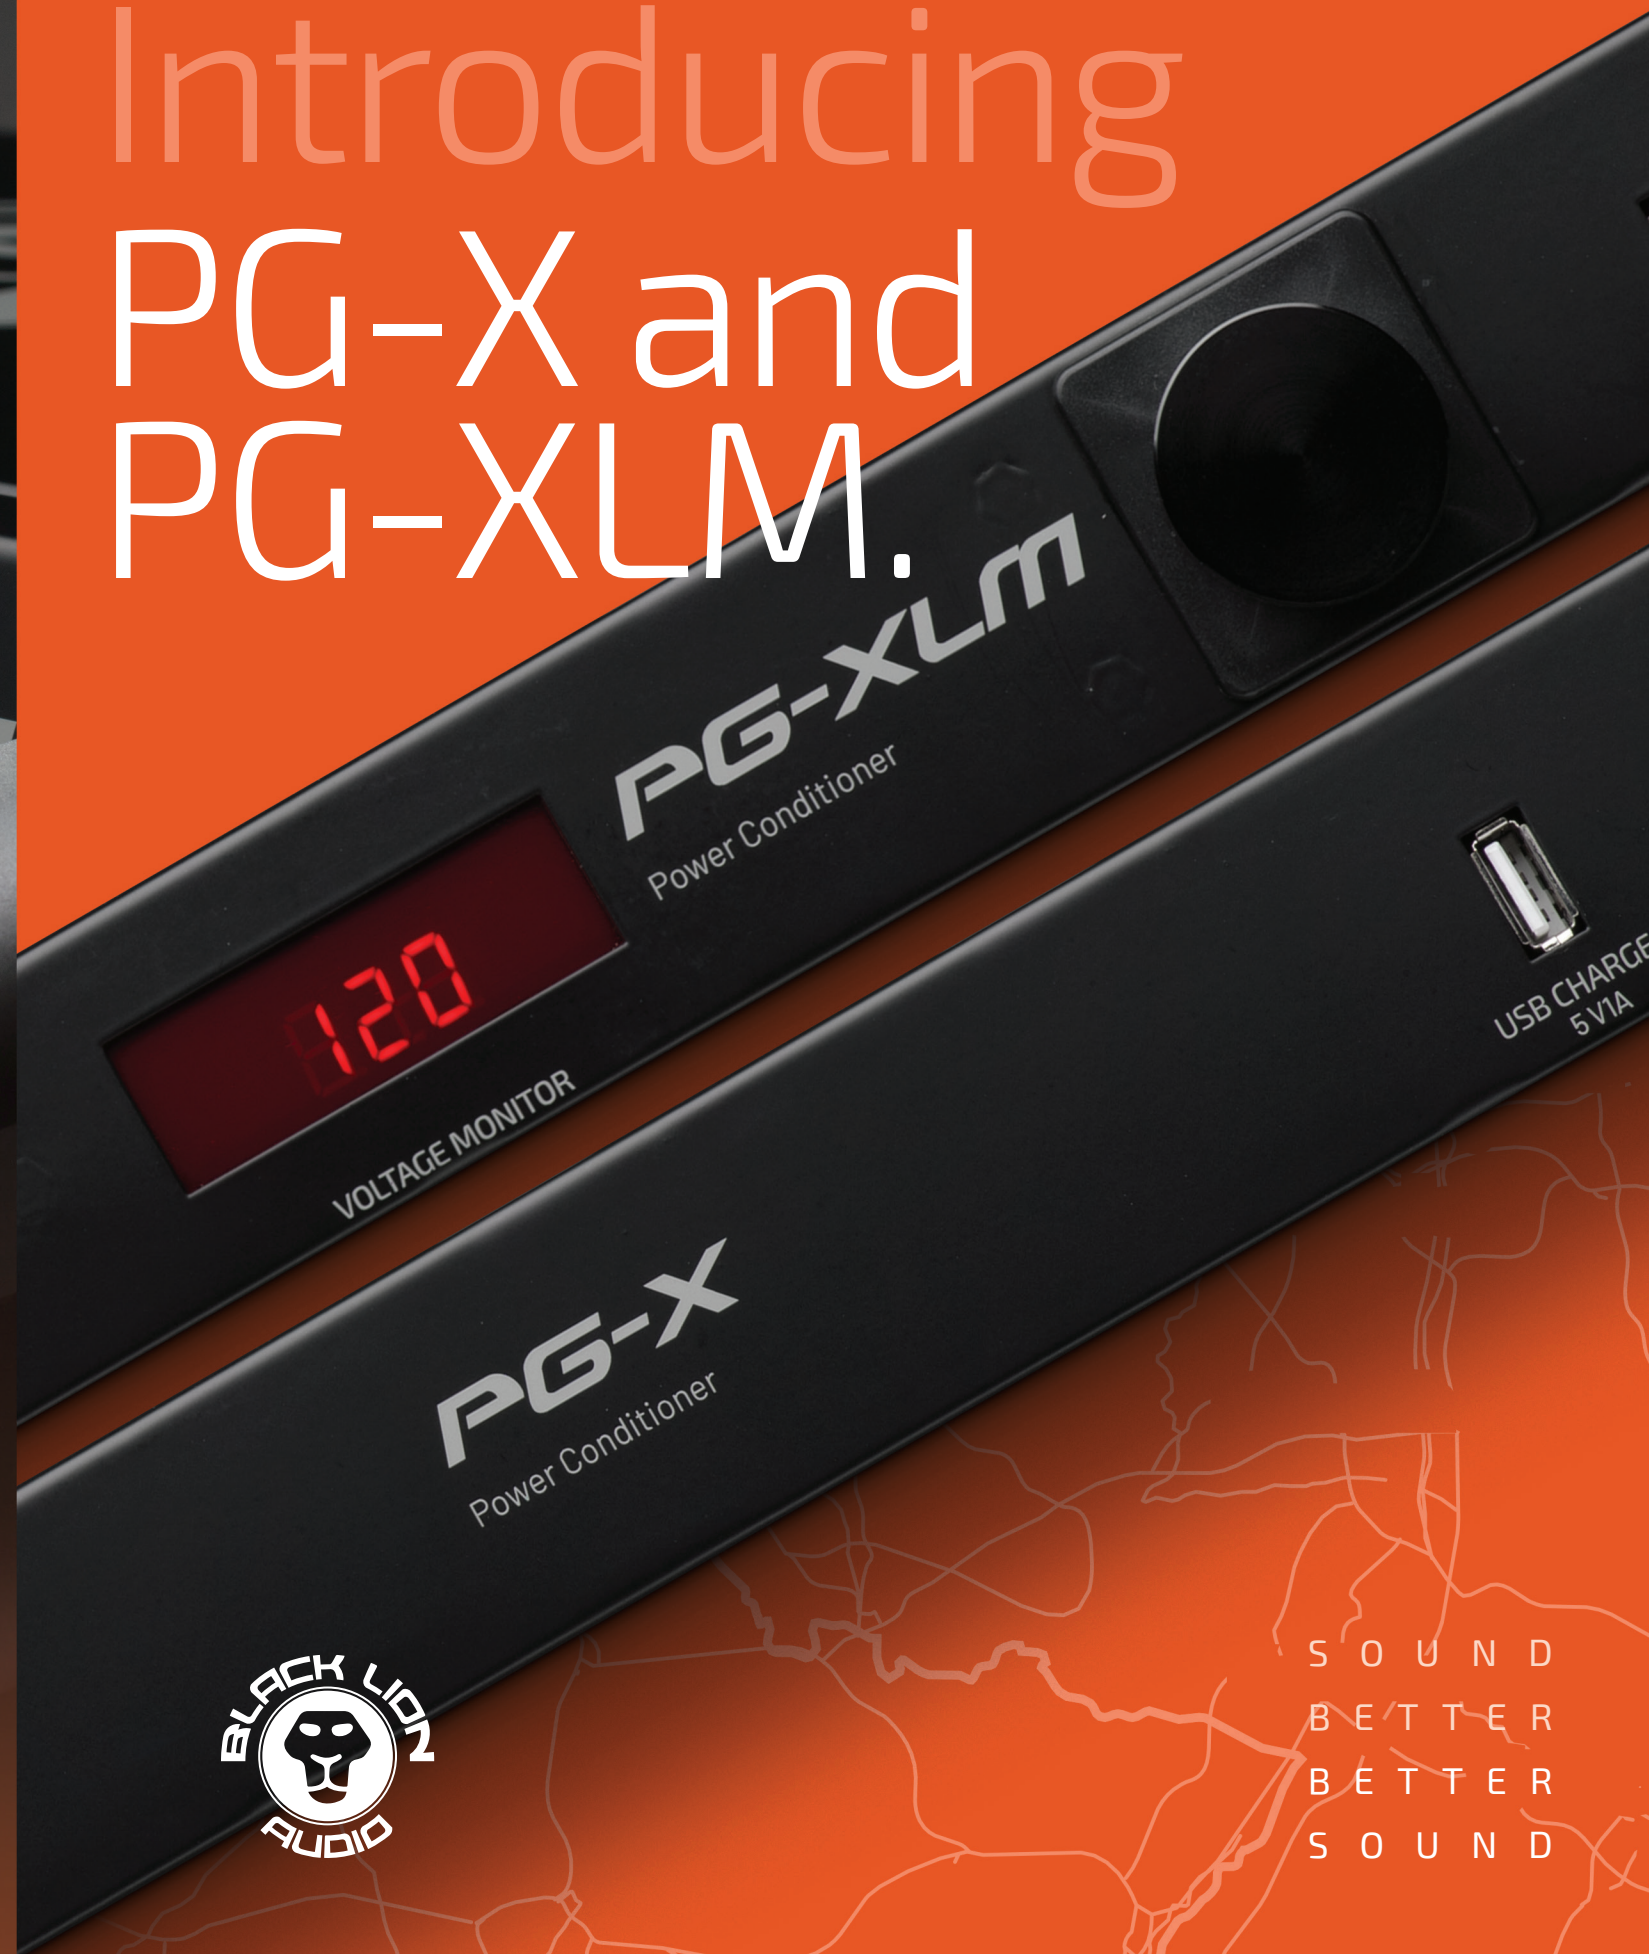

outlets on the back panel. On the front panel, the PG-X sports one switched convenience outlet and a USB port for device charging.

It takes more than a few rack-mounted outlets to inspire true confidence in your power conditioner, and that's where the PG-X and PG-XLM deliver: best-of-class power filtering!

Confidence inspiring power.

There's nothing worse than scoring that "must-have" piece of gear, only to find that it's noisier than should be expected, missing high frequency detail, or even worse – having it fried by power surges!

Black Lion Audio has been trusted for years for modifying the best gear and making it even better, and that's what it

took to create the PG-X and PG-XLM: taking industry-standard designs, and improving them to the point of peak performance.

After creating the original PG-1, we knew that plenty of professionals on a smaller budget felt left out, as some features might not be as important as an economy price-point. The PG-X and PG-XLM were built with this in mind, while still providing best-of-class power conditioning!

High-end filtering.

Your gear deserves the best power, and we took great care in making sure the PG-X and PG-XLM delivers just that – thanks to PG-90 Filtering Technology. In testing, this has provided an **average of 90% of noise filtering**, as opposed to the typical average of 76% found in other power conditioners at the same price point.
